# WIZARDSOFTWARE™
### SOLUTIONS

# HOSTED BY WIZARD OR ON-PREMISE
## Which option is right for your company?

Wizard Software provides solutions in two ways: hosted by us as a web-based Software as a Service (SaaS) or by you using your on-premise network and hardware.

Each option offers its own advantages, and you enjoy the flexibility of selecting the implementation model that works best for your organization.

This guide is our way of partnering with you to make a more informed decision. No matter which implementation model you choose, we offer the same level of commitment and support at the same price.

We look forward to working with you to streamline organizational workflows and improve operational efficiency.

# YOU DECIDE WHO DOES THE HEAVY LIFTING: OUR EXPERIENCED ENGINEERS OR YOUR IT STAFF.

| HOSTED BY WIZARD | On-Premise |
|---|---|
| **TECHNOLOGY** | |
| ✓ **Server hardware procurement and set up** | • Set up dedicated server/VM |
| ✓ **Server Maintenance** | • Perform regular maintenance, updates, reboots, etc. |
| ✓ **Software Installation and System Configuration** | • Install software via remote download<br>• Set up and manage server<br>• Establish user accounts<br>• Install software on each machine |
| ✓ **Active Directory Integration** | • Set up active directory integration |
| ✓ **System and Data Backups** | • Backup and recover software and data |
| ✓ **End User Deployment** | • Deploy software to end users |
| **SECURITY** | |
| ✓ **Technical Support and Help Desk** | • Enable remote access to on-premise server and end user desktops<br>• Update security settings, anti-virus software, and operating systems |
| **USER FLEXIBILITY** | |
| ✓ **User License Management** | • Manage and maintain end user licenses<br>• Add, swap, or remove licenses according to contract |

# TECHNOLOGY

## HOSTED BY WIZARD

### We handle everything

When we host your solution, we become the de facto IT department for the implementation—seamlessly managing all servers and software, as well as daily backups, patches, and hardware upgrades without additional cost. We also provide 24/7 server monitoring.

## On-Premise

### Your servers, your IT

The on-premise solution gives your organization full control over the procurement, setup, installation, and ongoing maintenance of your hardware and software. We will be on hand to assist in the setup, as permitted by your IT staff, and offer training on server best practices related to our solutions.

# SECURITY

## HOSTED BY WIZARD

### Minimum risk

We take data security as seriously as you do, and we have industry-standard protection in place for our software and data centers.

While our software solutions do not store personal data of any kind, your business data is protected in our secure, world-class data center. We provide all security patches, redundancy, and monitoring. We also offer optional SAML-based, single sign-on integration that allows authentication into our hosted systems using your internal network logins.

## On-Premise

### Internal standards applied

The on-premise model allows you to manage access to your solution using the security standards and procedures that govern your IT estate. Your IT group is also responsible for backing up the solution.

# USER FLEXIBILITY

## HOSTED BY WIZARD

### Anywhere, anytime

Our software solutions help your project managers, facilities personnel, and real property administrators work smarter from anywhere.

Users can access the system from any laptop, desktop, or mobile device—from the office, home, job site, and more—with only an Internet connection. Additional user licenses, modules, or solutions can be added quickly and independently of your IT staff.

## On-Premise

### You control access

Users can access their solutions via your organization's deployment as allowed by your IT department—via intranet, VPN, or other remote access methods.

## THE CHOICE IS YOURS.

While it is ultimately your decision how you will pay and account for this type of complex software purchase, we are here to provide support—whether you classify it as a capital or operating expense.
